

### Example case 1

Contract and financial transaction	Physical transport of the chemicals	Country of Origin in respect to the declarations
<p>A Swiss company has a contract with a Norwegian company (dealer only) for the delivery of a chemical which is subject to the CWC control regime. The Norwegian company has a contract with a manufacturer of the very chemical in Russia. The Swiss company pays the Norwegian company which then pays the Russian manufacturer.</p>	<p>The chemical is directly delivered by aircraft from Russia to Switzerland</p>	<p><b>Russia</b>            Rational: The chemical is imported directly from Russia. It is not transited through or nationalised by any other country.</p> <p>The course of financial transactions is not relevant.</p>

## Example case 2

Contract and financial transaction	Physical way of the chemicals	Country of Origin in respect to the declarations
<p>A Swiss dealer has a contract with an US manufacturer for the delivery of a chemical which is subject to the CWC control regime. The Swiss dealer resells the chemical to a customer within Switzerland. The customer transfers the payment to a UK Bank. The US manufacturer is paid by the UK Bank.</p>	<p>The delivery of the chemical is from the US by ship to the port of Rotterdam, then by lorry transited through Holland and Germany to be finally imported (nationalised by customs procedures) in Switzerland.</p>	<p><b>USA</b>            Rational: The chemical is only transited through Holland and Germany, but not nationalised by customs.             The course of financial transactions is not relevant.</p>

### Example case 3

Contract and financial transaction	Physical way of the chemicals	Country of Origin in respect to the declarations
<p>A Swiss company has a contract with an Indonesian manufacturer for the delivery of a chemical which is subject to the CWC control regime. The payment is made directly from the customer to the manufacturer.</p>	<p>The delivery of the chemical is from Indonesia by ship to the port of Rotterdam, then it goes by transit through Holland to France where it is nationalised by customs procedures and then imported into Switzerland.</p>	<p><b>France</b>            Rational: The chemical is transported through Holland and France to Switzerland. It was formally imported by customs procedures into France before it has been imported into Switzerland.</p> <p>The course of financial transactions is not relevant.</p>
